DRAFT CLAIMS - DO NOT PLACE IN FILE

A beauty analysis method, comprising:
instructing a subject to position a body part adjacent a display device and within a field of capture of an image capture device;
sending a signal to the display device to cause the display device to generate light in a predetermined wave length range for irradiating the body part;
capturing an image of the body part with the image capture device while the body part is irradiated with the light, in the predetermined wave length range, emitted from the display device; and
processing the image to derive information about at least one characteristic of the body part.

A beauty analysis method, comprising:
instructing a subject to position a body part adjacent a display device and within a field of capture of an image capture device;
sending a signal to the display device to control the display device such that light emitted from the display device is in a predetermined wavelength range, wherein the light irradiates the body part;
capturing an image of the body part with the image capture device while the body part is irradiated with the light, in the predetermined wave length range, emitted from the display device; and
processing the image to derive information about at least one characteristic of the body part.
